

Formulate Master 3ft Dynamic Backlit Display

FMLT-DYCL-WS3-01

The Formulate® 3' Dynamic Backlit Display adds visual intrigue to any event by coupling a programmed LED light curtain with an aluminum tube frame and captivating fabric graphics. Assembly is simple with light curtains that easily hook into the top and bottom of the frame and zipper pillowcase fabric graphics. The light pattern and timing is customized to bring the display to life. Stock animations are also an option.

This product may include the following materials for recycle: aluminum, select wood, fabric, cardboard, paper, steel, and plastics.

We are continually improving and modifying our product range and reserve the right to vary the specifications without prior notice. All dimensions and weights quoted are approximate and we accept no responsibility for variance. E&OE. See Graphic Templates for graphic bleed specifications.

features and benefits:

- State-of-the-art 50mm aluminum tube frame with bungee snap-button assembly
- Dynamic LED light curtains easily attach to the frame at the top and bottom
- Single sided pillowcase fabric graphic is printed on backlit textile and includes an opaque backer
- Custom or standard animation options available
- Kit includes: one frame, one single sided dye-sublimated zipper pillowcase graphic, one light curtain, one transformer, one controller, and one wheeled OCE molded storage case
- Easy to store and ship
- Lifetime frame warranty against manufacturer defects
- 90 day electronic component warranty

Connection Methods

Connection Method 1: TC-50-90T

Take the plastic connector and make sure the snap buttons are in proper position for the frame tube holes. Simply press the snap button with your thumb and carefully slide the tube onto the connector. The snap button should pop through. Some twisting may be necessary to assure the snap button has popped all the way through the tube hole. Do not force the connection and be careful with the tube edges, they may be sharp.

Connection Method 2: TC-50-90B

Take the plastic connector and make sure the snap buttons are in proper position for the frame tube holes. Simply press the snap button with your thumb and carefully slide the tube onto the connector. The snap button should pop through. Some twisting may be necessary to assure the snap button has popped all the way through the tube hole. Do not force the connection and be careful with the tube edges, they may be sharp.

Connection Method 3: SNAP BUTTONS

For snap button connections, locate the snap button on the connector or swage tube. Locate the hole on the corresponding tube. Press the snap button with your thumb and slide the tube and connector together so that the snap button snaps fully into the lock hole. To disassemble, press the snap button and pull apart.

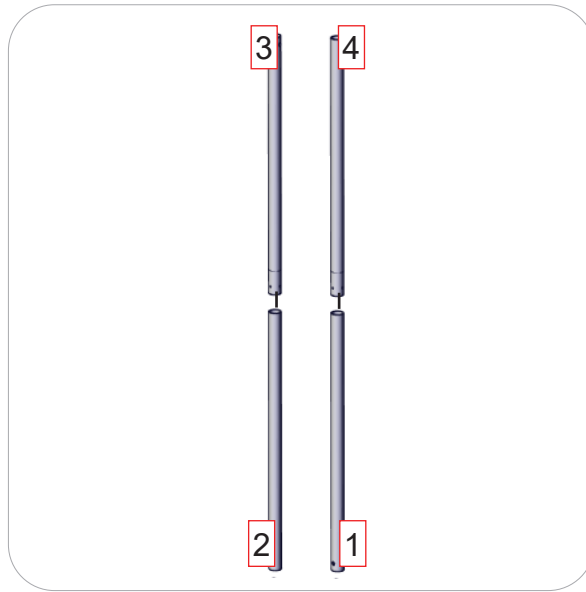

Frame Assembly

Step by Step

Step 1.

Unzip and remove all tubes from the bag. Assemble the bungee connected tubes using the push buttons. See Connection Method 3 for more details.

See Connection Method 1 for the top of the frame, and Connection Method 2 for the bottom of the frame.

Step 2.

Match the labeled numbers at the ends of the previously assembled tubes and combine to assemble the frame.

See Connection Method 1 for the top of the frame, and Connection Method 2 for the bottom of the frame.

Step 3.

Attach the feet by removing the bolt from the bottom of the upright tubes, placing the foot against the frame, and inserting the bolt through the foot and into the frame so the bolt head sits in the countersunk hole and is flush with the foot.

Hand tighten and lay the feet so they sit flat against the floor on their side.

Reference Connection Method 2 for more details.

Light Curtain Attachment

Step by Step

Step 4.

Remove one of the light curtains from its box and bring it to the frame.

Check the plugs of the curtain; with the male end toward the top of the frame, unroll the curtain with the bulbs facing down.

Be sure to keep the padding and packaging to protect the lights during storage and shipping.

Step 5.

Hook the light curtain clips into the two holes at the top of the frame closest to the side.

Step 6.

Unroll the light curtain and leave the bottom loose.

Repeat Steps 4-6 until all curtains have been hooked to the top of the frame.

Step 7.

Insert any excess cable of the light curtains into the hole of its connected hook to prevent it from pushing against the graphic.

Light Curtain/Graphic Attachment

Step by Step

Step 8.

Move to the bottom of the frame and insert the light hooks from the bottom of the curtains into the holes.

Step 9.

Tighten the curtain light cables so that the curtain is taught with the frame and insert excess cable into the bottom hole to prevent it from pushing against the graphic.

See next page for in-depth instructions on tightening the curtain, and page 10 for wiring the lights.

Adjusting Light Curtain Tension

Locate the curtain light hook button.

Press down on the button releasing pressure from the curtain light cable.

While pressing down on the button pull the cable away from the curtain light until it is tight with the frame.

Power Connection

Step by Step

Step 10.

Connect the light curtain to the transformer for power;

From the back of the frame, plug in the black plug of the light curtain to the transformer plug.

Connect the controller to a transformer for power (see image on the right);

From the back of the frame, plug in the black plug of the controller to the transformer plug.

Front View

Applying Graphic & Powering Up

Step by Step

Step 11.

Rotate the feet to their correct, perpendicular orientation.

With the frame still laying on the ground, pull the pillowcase graphic over the top of the frame to begin fitting.

Make sure the graphic is being installed evenly down both sides of the frame.

Step 12.

Once the graphic has reached 1/4 to 1/2 way down the frame, you can stand the frame upright to assist in installing the graphic the rest of the way down the frame.

Roll up the padding for the lights and store in the light curtain boxes to use during dismantle.

Step 13.

Zip the bottom of the graphic; one section for each light curtain.

Step 14.

Plug in the transformer.

Do not cover or hinder airflow to the transformer as it needs air circulation to work properly.

Set up is complete.

Note: In the US, set the transformer to 115v; International, set it to 230v.
